ALL REPORTS ARE NOW VISIBLE

If a user has been granted the Reporting role, all reports are now viewable, instead of needing to check individual reports. The reports are now in a Radio button list for simplified selection

REMOVED OPERATORS CHECKBOX LIST

The Operators checkbox list was not used and was removed to improve page speed. Although it appeared as a filterable object, it was not operative so it was removed. The Oil allocation letters reports that use Operators will look (as they always have) at ALL the operators list in the report generation.

NEW REPORT: DISPOSAL LOAD EXTENDED DETAIL (MULTI-SITE CSV)

This new report is only available to CSV, due to the potentially large number of rows that may be generated. Depending on the number of sites picked, the report generation to .CSV file may take from a few to several seconds.

ALLOW DUPLICATES TO CALCULATE PROPERLY (for certain report)

Duplicate tickets are allowed in the Ticket Management System. An example of this may be pipeline volumes. By default, several of the TankLogix reports also allow these duplicates.

Some of the most common reports are the Disposal Load Detail * and Disposal Load Summary * reports. The Load Detail, Load Extended Detail (both online and CSV only options) allow the duplicate in the calculations by default. However, the Load Summary and Load Summary with Rates do NOT allow duplicates by default. Thus the need for the added control described here:

The **Disposal Load Summary** report now allows duplicates in the calculations (default is to remove duplicates, as a check to make sure duplicates *were not intended to be entered* in the Ticket Management grid).

By checking the **ALLOW DUPLICATE TICKETS IN CALCULATIONS** checkbox, the final values will match up between the Load Detail and Summary Reports.
